Designer Training

Viedoc Designer Training is available to organizations that wish to build their own studies in Viedoc. After completing the course, the approved participants become certified Viedoc Designers and will be able to independently do study setups as well as train the site and monitoring staff. Studies can be built during training.

The training consists of a system use introduction, three 90-minute lessons with homework assignments after Lesson 1 and 2, and a follow-up:

System use introduction

- ✔ Introduction to the Viedoc System as Investigator, Monitor and Data Manager

Lesson 1

- ✔ How to build a study
- ✔ How to design a form
- ✔ Program simple edit checks and visibility conditions
- ✔ How to arrange forms according to the study schedule
- ✔ How to add a site
- ✔ How to assign the study design to that site

Lesson 2

- ✔ How to handle changes to the system after going live

Lesson 3

- ✔ Study management functions

Follow-up

- ✔ Since Viedoc is continuously adding new features to learn about, Viedoc Designer Training is an ongoing process. An optional, yearly “refresher course” is available at the organization’s request. The refresher course is meant to answer any questions the organization may have since starting to build their own studies, as well as introduce them to new features added to Viedoc since their initial training.

No. of participants: 1-5
Pace of study: One lesson per week
Location: In person or via web-con software
Including: Study material, diploma
